

HAMAP-Humanitaire

WATER AND SANITATION PROJECT

EXTENSION OF THE DRINKING WATER NETWORK IN THE RURAL COMMUNE OF SOLA

MUNICIPALITY of SOLA, PROVINCE OF TANGANYIKA, DEMOCRATIC REPUBLIC OF CONGO

LOCAL CONTEXT

With the support of several financial partners, HAMAP- Humanitaire, in collaboration with the FAPMMN Foundation, has set up a drinking water supply system in the isolated rural commune of Sola in the Democratic Republic of Congo.

To date, the network includes :

- Protection and catchment of a water source
- A reservoir with settling tank
- A 55m³ water tower
- 3 km of network (PEHD63)
- 6 standpipes and 5 administrative connections

In addition to the construction of these facilities, the population was made aware of good hygiene and water management practices, and several management committees were set up to monitor the service. Buoyed by the success of this project, the FAPMMN Foundation has once again approached HAMAP-Humanitaire to extend the network already in place and enable as many people as possible to benefit from easier access to water.

Project duration

18 months

Beneficiaries

7500 people including 1845 students

Budget

159 000€

Obtained to date

 22 %

Project objective

Improving access to and management of drinking water services in the commune of Sola, DRC

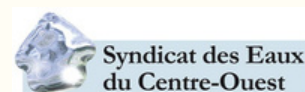

MAIN ACTIVITIES IMPLEMENTED

- //Laying of a second delivery pipe
- // Extension of the water network by around 3km (Grand Sola and Kasanga II)
- // Creation of 8 standpipes and 8 private connections
- // Training of management committees
- //Organization of awareness-raising sessions

LOCAL ACTORS AND PARTNERS

Fondation des Amis du Père Norbert Mwishabongo (FAPMMN) : Local foundation in charge of coordinating the work, with support from HAMAP-Humanitaire

Chefferie de N'Kuvu : traditional local authority in charge of water management
