## WATER AND SANITATION PROJECT

### WATER ACCESS PROJECT IN THE COMMUNE OF OUÉLÉNI IN BURKINA FASSO

 OUÉLÉNI, BURKINA FASSO

### LOCAL CONTEXT

Within the framework of the decentralized cooperation between the city of Autun (France) and Ouéléni (Burkina Faso), several international solidarity projects have taken place between the two communes in order to promote local development. In 2020, the city of Autun and SMEMAC financed a feasibility study to analyze different options for the implementation of a project to strengthen access to drinking water in the commune of Ouéléni. This study led to the creation of the present project, the objective of which is to sustainably improve access to water and sanitation in Ouéléni and 17 surrounding villages.

To do so, three results will be achieved

- Access to drinking water and sanitation is strengthened
- Good water management and hygiene practices are adopted by the inhabitants of Ouéléni
- The formation of management committees allows the sustainability of the water service

With the support of the Association for Cooperation and Development (ACD), its local partner, delegated as project manager by the commune of Ouéléni, the city of Autun and the local authorities wish to facilitate access to water for approximately 18,000 people.

### GOALS

- // Realization of an APD study.
- // Construction of 1 AEP.
- // Construction of 5 boreholes.
- // Organization of awareness sessions.
- // Training of management committees.

### ACTORS AND PARTNERS

**HAMAP-Humanitaire:** project management assistant.

**ACD Association and the town of Ouéléni:** local partners.

**Autun municipality:** French municipality in charge of the project, in cooperation with the city of Ouéléni
