WATER AND SANITATION PROJET

ACCESS TO DRINKING WATER,
SANITATION AND MENSTRUAL
HYGIENE IN 14 MARGINALISED
VILLAGES

TAMIL NADU, INDIA

LOCAL CONTEXT

The aim of the project is to support families in 14 marginalised villages located in the three priority districts targeted by this project in Tamil Nadu: Kanchipuram, Villupuram, Chengelpettu and in the urban area of Pondicherry. These districts are characterised by the density and poverty of their populations. The health situation is alarming, with virtually no sanitation or drinking water infrastructure. Access to drinking water is by tanker truck, while open defecation is widespread.

This project aims to improve living conditions for local people, particularly women, **by improving access to water, sanitation and personal and menstrual hygiene.**

MAIN ACTIVITIES IMPLEMENTED

// Access to water: installation of seven borehole drinking water stations, treatment by reverse osmosis and point of sale to the population.

// Access to sanitation: construction or renovation of 290 family latrines for priority households.

// Hygiene: training and awareness-raising sessions in target villages and schools.

// Menstrual hygiene: training in entrepreneurship for the manufacture and sale of low-cost, environmentally-friendly sanitary towels.

OPERATORS AND PARTNERS

HAMAP-Humanitaire and Amis d'HAMAP du Centre: supervise and coordinate the project.

NGO IRDRP : local partner, Indian association that implements activities in the field.
