WATER AND SANITATION PROJECT

ACCESS TO WATER, SANITATION AND HYGIENE IN THE DANG KAMBLET COMMUNE

STUNG SEN BASIN, CAMBODIA

LOCAL CONTEXT

Water and sanitation remain key issues for development in Cambodia. Since 2012, the Rhine-Meuse and Loire-Bretagne water agencies have been supporting the Tonle Sap Lake authorities to promote Integrated Water Resources Management (IWRM) in the Stung Sen river basin. HAMAP-Humanitaire contributes to this objective by proposing various water and sanitation projects in priority villages in this basin. The aim of this project is to set up a drinking water supply system and improved sanitation infrastructure in the village of Dang Kamblet, which currently has none.

This project is therefore part of a more global and concerted program of water management and governance throughout the Stung Sen basin, in close collaboration with numerous French and Cambodian stakeholders.

Project duration

24 months (July 2024 - June 2026)

Beneficiaries

3,000 people

Budget forecast

325 000 €

Financing obtained

 80 %

MAIN ACTIVITIES IMPLEMENTED

- // Installation of a drinking water supply system in the commune of Dang Kamblet (borehole, reservoir, networks, connections);
- // Creation and training of village water management committees.
- // Raising awareness of hygiene and the proper use of water, particularly in schools.
- // Construction of 100 latrines for vulnerable families.

PLAYERS AND PARTNERS

HAMAP-Humanitaire: oversees and coordinates the project.

Rain Water Cambodia: Local association: monitoring work, training management committees.

Commune de Dang Kamblet: Project owner

Tonlé Sap Authority: Regulatory authority for water and sanitation projects in the Stung Sen basin.
